

Meeting Minutes on 210426

Requirements Gathering

Meeting Details

Field	Detail
Meeting Title	Dreamz Requirements Gathering Apr 21, 2026
Date	21 April 2026
Time	9:30am - 4:00pm
Location	Wisma IJM
Attendees	Azureen (Dreamz), Kay, Jayden, Jayson (Foundryx), Casey, Hazel (Globalcomm)

Discussion

The business process flow is described in phases below:

- **Phase 1: Quotation**
 - Client engage Dreamz
 - Dreamz send onboarding checklist, quotation checklist (will ask whether want setup payment gateway)
 - Client revert onboarding checklist, quotation checklist
 - Dreamz check domain availability and suggest website domain name to client
 - Currently using godaddy, suggest to use DNS Checker as it can check for subdomain as well
 - Dreamz prepare quotation
 - Will attach documents like certificates for finance to register e-perolehan
 - Client decide final website domain name, purchase domain and revert to Dreamz
 - Dreamz send excel form to client to confirm things before putting into web builder
 - Dreamz use AF to build the website according to requirements
 - Suggest to use AI to build website according to requirements, then Dreamz can enhance & improve, reduce the initial setup time
- **Phase 2: Registration**
 - Enter all details including personal details, event related details

- Suggest to just key in email, name first to create account, then key in details later
- Can select add on items (e.g. pre-congress seminar etc.)
- There is early bird, regular, on site, these items are available in different period of time
- System will have change email function in case of typo or change of personal email
 - System will send verification to old email to allow the change of email
 - This is to save Dreamz time spent to support this kind of administrative work
 - This only applies to change of personal email, for change of company email, users will lose access to previous company email and previous events
- After user submits the registration, account is created in the system and email notification is sent to user
 - if 1 person (e.g. Jayson) participates in multiple events (e.g. 5), then 5 accounts are created in AF
 - suggest to have 1 user profile per user so user can use 1 account to access all events
 - user can login to the system, see all past, present & future events, user can use 1 email & password to access all invited events, don't need to remember different password for different event
 - Suggest to have 2 levels of validity
 - System validity - user can only access the system within the validity period, this is to control the subscription of user, user must subscribe to have access to the system
 - Event validity - user can only access the events in the system within this validity period, this is to manage those past events to disallow user from accessing and making changes
- **Phase 3: Abstract Submission**
 - There is a submission window, users can only submit abstract within this window
 - User must register to the system first, then only can login to the website and submit abstract
 - User enters details like abstract title, description, choose abstract category
 - The one submitting abstract might not be the one presenting the abstract
 - Will choose oral / poster presentation
 - Can save as draft or submit
 - At the same time, client will nominate reviewers for each abstract category
 - email is sent to the reviewers to either accept / reject the invitation to review
 - after reviewer accepts, suggest to auto create account for them and send invitation email to them
 - after reviewer accepts, suggest to notify client and Dreamz

- **Phase 4: Abstract Review**

- Reviewer logs in to the website to add review
- Usually 1 abstract needs 3 review (configurable)
- There is a review window, reviewer can only review within the window
 - System sends link to reviewer to review the abstracts
 - Suggest to send reminder every week
 - If reviewer has not reviewed within the window, escalate to Head of Scientific Committee (HoSC)
 - Reviewer can change mark as long as it is within the review window
 - Reviewer will suggest oral / poster presentation
 - Submitter will request Dreamz admin to open the abstract for editing after during review window. Suggest to directly allow the submitter to edit, but the system will create a new version for the abstract so the reviewer is aware. But the decision to entertain the new revision is up to the reviewer
 - This is to save Dreamz time spent to support this administrative work
- After review window ends, Azureen will compile the list of abstracts from the system and send to HoSC
 - Azureen needs to manually calculate the average marks, sort by highest marks
- HoSC decides the final presentation mode for all participants
- Participants gets notified about the final decision
- If participants accept --> proceed to make payment
- If participants reject --> can appeal to HoSC
 - HoSC can either accept / reject
 - If accept, HoSC will swap with other participants
 - There needs to be a waiting list for HoSC to decide on who to swap with
 - If reject, the participants will withdraw from the event or choose to accept the final decision by HoSC
 - if submitted doesn't appeal and accept --> will make payment --> mark the slot as accepted

- **Phase 5: Make Payment**

- After knowing the final presentation mode (oral / poster), participants proceed to make payment
- Print proforma invoice
 - Currently, AF does not support multiple time slots in the email template
- Payment method
 - others (bank etc.)
 - e-perolehan
- If choose others, will use either Dreamz / client's payment gateway
 - ipay88
 - stripe
- If choose e-perolehan, will enter PO reference number & upload PO

- Suggest don't need participants to enter PO reference number & upload PO since this documents come from the participants' finance
- Finance should go to the system, upload the PO / excel once
 - System identify the list of users in the PO / excel, auto create account for those users that haven't registered and send invitation email to them
- An email is sent to participants once payment received
- After payment is received, will mark the participants as 'Active'
 - Active means the participants are confirmed to be eligible for the event
 - This step is not automated, requires human verification
- An email is sent to participants once marked as 'Active'
- After making payment, participants can nominate other users to participate on behalf, the other users don't need to pay
 - System needs to track this nomination and display in the report (there is a user list report)
- Few days before the event, will send QR and reminder to the user
- **Phase 6: Scheduling**
 - AF has agenda builder function
 - It is linked to the event website. The schedule in agenda builder can be viewed on the website. Participants also can login to website to see their schedule
 - Dreamz assign venue, add slots and sub slots
 - There can be different venues in 1 slot
 - Dreamz assign slot to oral presentation participants
 - The user experience of AF is difficult to navigate in terms of adding sub slots, assigning slot, rearranging the slots
 - System needs to allow drag and drop to drag the participants into the slot, and have a clear view of which participants have or have not been assigned
 - When time slot is created, it is not confirmed yet
 - For oral presentation, the time slot is confirmed once the participants make payment
 - For speaker, will send notification to speaker, speaker can accept or propose new time slot
 - The system need to cater when a time slot is delayed, all the subsequent time slots will be pushed back and notify the participants / speaker
- **Phase 7: Event Day**
 - Crew scans QR of participants
 - If participants haven't made payment
 - Currently, when user haven't made payment, AF doesn't have clear indication, it just shows a red circle
 - Will be redirected to on-site payment counter
 - Participants need to make payment using cash, TnG, etc.
 - Crew marks the participant as 'Active'
 - Crew print physical badge

- If participants already made payment
 - Crew print physical badge
- AF supports multiple checkpoints, can allow different user segment to the checkpoint, each checkpoint can be controlled to be single-entry or multiple-entry
- For each time slot
 - suggest to have auto 30 minutes reminder before session to the presenter
- **General**
 - There are many templates in AF
 - Email template
 - Email template needs to support displaying multiple time slots for the participants. Currently AF doesn't support that
 - Certificate template
 - Ticket template
 - Badge template
 - Invoice template
 - In invoice template, system needs to support attaching supporting documents like certificates for finance to submit for e-perolehan
 - etc.
 - Suggest to have meetings matching feature in new system to improve interaction between participants
 - There is a Tags feature to tag each user to departments like management, marketing. This will be displayed in the event's website

Actions

Action	Assignee	Due Date
Access to AF	Azureen	24/4/2026
Sample templates for email, ticket, badge etc	Azureen	24/4/2026
Excel of pain points she shared just now	Azureen	24/4/2026
